SASCI

Daily solution the SASCI will provide you
and your sterilization department!

Q. Is it a pass or fail?

A. It takes the guess work out of the analysis. The SASCI technology analyses each indicator to determine if it is a pass or fail. If the load is a pass, then it can safely be released, thus reducing production delays.

Q. Can I get instant retrieval of archive results?

A. The SASCI stores all results and they can be retrieved on demand in either screen or printable format. This is likely to save retrieval costs from storage facilities.
